Update module:

The update module supports functions to install individual modules to the dataHUB-Xi web-administration.

These modules can be driver admin packages, language packages, css themes and so on.

The screenshot shows the Buhler dataHUB-Xi web administration interface. The top navigation bar is blue with the Buhler logo and several menu items: DATATHUB-XI, CONFIGURATION, DEBUG, WAKEONLAN, DRIVERS, CERTIFICATES, LOGFILES, LOGIN, and INSTALL (which is highlighted). Below the navigation bar, the main content area is white and contains the text "select module to install as zip package". Below this text is a file selection interface with a button labeled "Durchsuchen..." and the text "Keine Datei ausgewählt.". Below the file selection interface is a blue button labeled "INSTALL". At the bottom of the page, there is a grey footer bar with the text "Copyright Bichler Technologies GmbH 2019 All Rights Reserved".

To install a new package, open the INSTALL-site via menu „INSTALL“, select a zip file and press install button.
